

Skapa subdomän

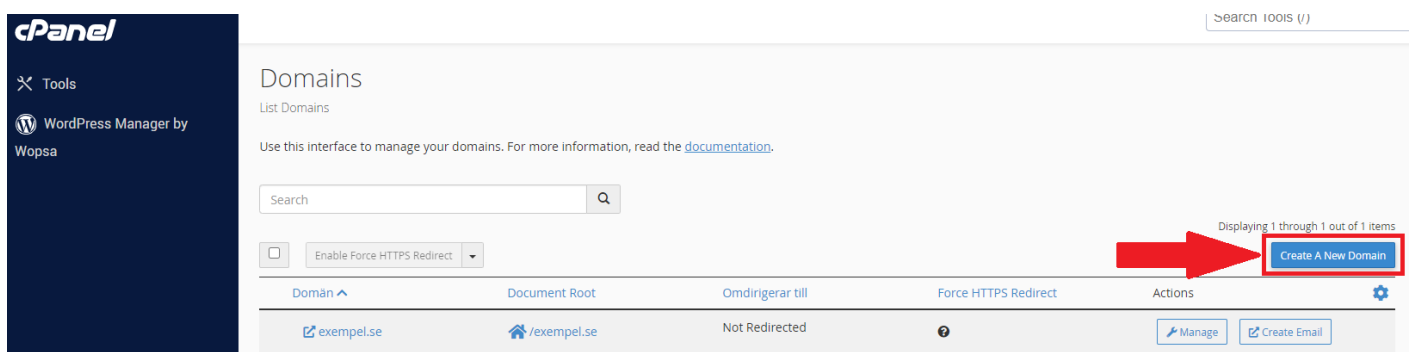

Hur skapar jag en subdomän?

Först måste du logga in på cPanel, guide till det finns [HÄR](#).

Scrolla sedan ner till fliken Domains och klicka sedan på "**Domains**".

Då kommer du hit och där trycker du på "**Create A New Domain**".

Där inne börjar du med att skriva in vilken subdomän du vill skapa.

Create a New Domain

Domän ?

Enter the domain that you would like to create:

exempel.exempel.se

Document Root (File System Location) ?

If the document root is shared then the created domain will serve the same content as "exempel.se". **This setting is permanent.**

☐ Share document root (/home/wopsate1/public_html) with "exempel.se".

 exempel.exempel.se

Specify the directory where you want the files for this domain to exist.

Submit

Submit And Create Another

[Return To Domains](#)

Se till så "Share document root" är urbockad som bilden visar.

Create a New Domain

Domän ?

Enter the domain that you would like to create:

exempel.exempel.se

Document Root (File System Location) ?

If the document root is shared then the created domain will serve the same content as "exempel.se". **This setting is permanent.**

☐ Share document root (/home/wopsate1/public_html) with "exempel.se".

 exempel.exempel.se

Specify the directory where you want the files for this domain to exist.

Submit

Submit And Create Another

[Return To Domains](#)

Till sist klickar du "**Submit**".

Create a New Domain

Domän ?

Enter the domain that you would like to create:

exempel.exempel.se

Document Root (File System Location) ?

If the document root is shared then the created domain will serve the same content as "exempel.se". **This setting is permanent.**

☐ Share document root (/home/wopsate1/public_html) with "exempel.se".

exempel.exempel.se

Specify the directory where you want the files for this domain to exist.

Submit

Submit And Create Another

[Return To Domains](#)

Sen är det klart!
